Dual View Under-the-Door Camera

Safely View into an Adjoining Space for Covert Tactical Operations

The **Zistos Dual View Under-the-Door Camera (ZDV-CP)** is a valuable addition to any tactical system. This camera provides a safe and covert view both of a forward looking view into a room, as well as an upwards facing view to see the back of the door. Using IR illumination and frame integration electronics enables the **ZDV-CP** to provide a better quality image in total darkness — up to 20 feet.

The **ZDV-CP** camera only needs $\frac{1}{4}$ of an inch (6.4 mm) door-to-floor clearance, and uses a specialized 8-foot pole to maneuver the camera from a safe distance. The camera includes a cable, air hand pump door jack and is compatible with any of our WalkAbout displays. It not only gives you a covert visual perspective of the interior of a room but has the ability to provide audio surveillance as well.

Dual View Under-the-Door Camera

- The Dual View camera provides a safe, covert view of both forward and upward looking at the back of the door
- Frame integration electronics provides superior image in total darkness
- Audio enhancement circuitry amplifies low sounds while suppressing loud sounds
- Direct video cable connection (without pole) for static surveillance situations
- Compatible with all Zistos systems through VisionFlex® — our modular design philosophy
