

Pole Support Rod & Bracket

PSR-HD/PSB-HD

The Pole Support Rod (PSR-HD) is an adjustable steel rod that attaches to any ZistosHD motorized or a friction hinge pole. When the foot of the rod comes in contact with the bottom surface of the compartment being inspected, it stabilizes the pole and camera. It is intended for downward vertical applications, such as pipe or vault inspection.

FEATURES

- Dual contact points on the foot maximize stability
- Adjustable length up to 3ft
- Easily removed and reattached in the field with thumbscrews
- Stores in the ZistosHD case with a minor factory mod to the case foam
- Already included in all HD Vault Inspection systems

The Pole Support Bracket (PSB-HD) spans an opening, such as a manway or hatch, and supports any ZistosHD motorized or friction hinge pole, in the vertical position. The pole can be manually rotated and a motorized pole can be panned to view in any direction.

FEATURES

- Constructed from heavy tubular steel to support the weight of someone accidentally leaning on it
- The pole easily inserts into the center support and drops into a recess to prevent accidently removal
- Removable outriggers allow it to store in the ZistosHD case with a minor factory mod to the case foam
- Can co-exist in the same case with the Pole Support Rod
